## Connecting and Protecting Essential Industries During an Unprecedented Event

During this time of uncertainty due to COVID-19, we are prioritizing the health and safety of our employees, customers and partners. As we navigate this unprecedented event together, many localities, states and countries have implemented shelter-in-place orders or other stay-at-home directives to help slow the spread of COVID-19. Many of you rely on us to provide the products that connect and protect essential infrastructure projects that are especially critical during this time, including in such industries as food and beverage, healthcare, water/waste water, commercial construction, oil refining, data and networking centers and telecommunications systems.

development of local, state and country government directives, and in addition, we've aligned our actions with the guidance of the World Health Organization (WHO) and the Centers for Disease Control and Prevention (CDC), as well as local health authorities.

### **Keeping employees safe while serving critical industries**

The health and safety of our people remains our priority. Here are some of the actions we have taken to help keep our people and our facilities safe, while remaining focused on servicing our customers:

- We've asked our employees to take social distancing actions to support "flattening the curve" to slow transmission of the virus within our communities.
- We have encouraged all employees who can work remotely to do so.
- At our manufacturing and distribution facilities, we are creating separation between teams and shifts.
- We are implementing staggered breaks.
- We have increased promotion of recommended hygiene practices.
- We are enhancing our cleaning processes across our facilities.
- We have suspended all non-critical visits to all nVent locations.

### **How we can work together to serve customers**

Together with you, we serve customers that operate across many industries.

We have more than 130 facilities – including manufacturing, service and distribution centers – around the world and are working diligently to continue to serve you. We recommend that all distributors review current inventory levels to be certain they have adequate stock of high running products.

As this situation evolves, we will continue working to evaluate potential COVID-19 impacts to employees, operations and you.

—whether working at one of our locations or onsite at a customer location—during this uncertain time.

Please feel free to reach out to the nVent customer care team or your nVent sales representative with any questions.
